

# Different Users in 1228/103

---

## Workflow Changes

When posting the 1228, we will check the case access for the user listed in the 1228 to verify the user has access to the case created by a 103. This allows for situations where the user listed in the 103 is not the same user for the 1228. If the user in the 103 is not the same as 1228, and the user in 103 is not created, we will create the 103 user when processing the 103. (EST. 32 hours).

## Features/Requirements

Ability to directly access a case generated by a different user than the one that created the application via the 103. The user in the 1228 must have access to cases created by the user in the 103.

Update the 103 to allow the user to be created based on the info in the incoming 103. The 103 will accommodate a company producer ID, producer name, and role code.

## Admin Changes

No Changes.

## App Changes

No Changes.
