iConnect 255515 Design Approach - Comma Characters in Custom Lists not supported

Project Overview

Custom lists currently do not support comma characters within the tab delimited file that is used at the time of importing data. Commas used in the fields gets replaced by a space. With this feature, FireLight base will support adding commas in the file and saving into the system as they are.

Impacts: Upload custom list (tab delimited file) process will be updated. When the txt file is uploaded with commas within the text fields, commas will not be replaced with a space

1 Update Custom List import process

Currently when a tab delimited file (.txt) is imported to create a Custom List, comma characters (,) present in the text field gets replaced with spaces. This new feature will read comma characters as they are and will not replace them with a space.

Acceptance Criteria

- When a tab delimited file containing commas is uploaded for Custom List, commas are not replaced with a space during upload process.
