

IConnect 135783 Admin: Allow multiple forms in package to be moved up and down

Project Overview

Allow multiple forms to be moved up and down in the package. Currently Form developers must move forms one at a time. This is very time consuming when editing packages.

Features/Requirements

- Enable Up/Down on Multiple Forms selection
- Manage Multiple forms to be moved Up/Down by clicking button
- Maintain their order accordingly

Use Cases / Workflow Changes

There are no changes to the normal workflow of the system. We are adding new functionality in package view to move Up/Down multiple forms

Admin Changes

To add this functionality first we need to enable up/down button on multiple forms selections, currently we enable only on single form selection. We need to Modify “MoveFormsUpDown” method in controller and on UI also need to make some changes in JavaScript functions “MoveUpDown”, “MoveFormInList” “MoveScrollBar” & “SetUDButtonState”.

To achieve this, we need to put lots of conational changes, like if first form selected disable “Up” button, and if last form is selected disabled “Down’ button. When multiple selected and up button is pressed, move from one index up and change their order and do same for down button, move one index down.

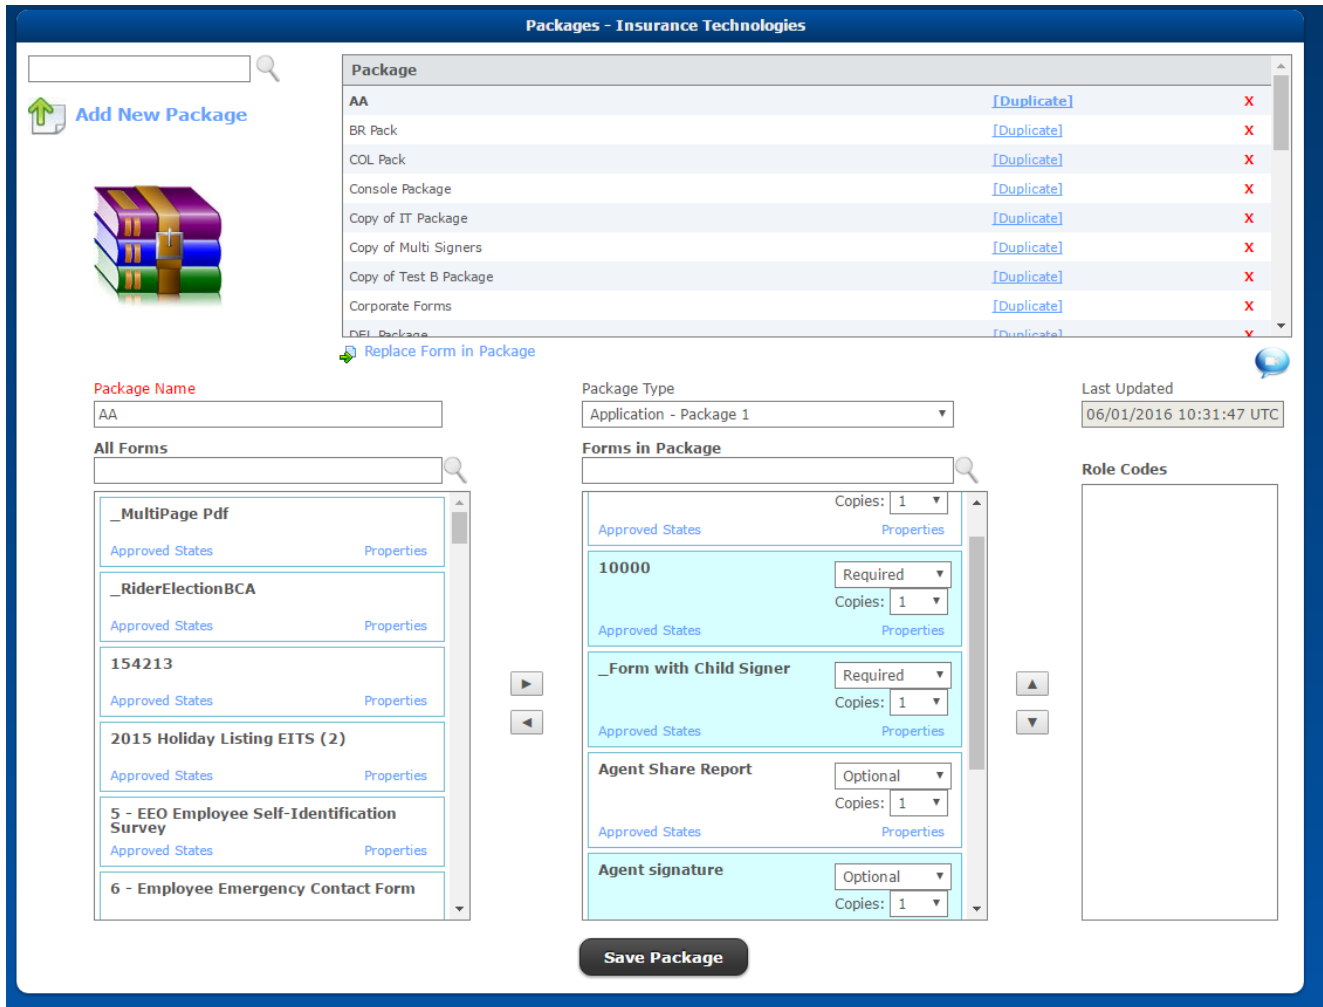

App Changes

No changes required in app.

Integration Changes

There is no change in Integration Process.
