iConnect 127011 Design Approach

Provide a carrier controlled message that a form has been updated - both before and after lock down.

Workflow Changes

There is no changes to the normal workflow of the system. We just need to show a message to user if there is any changes made in forms of the application.

Features/Requirements

Currently, if there are any changes (added/removed) made in forms in package, there is no system that can notify the end user about it. The end user in FireLight application is not aware that changes actually happened. The application may be in LOCKED state and in this case user must need to unlock application to get latest changes.

For above requirement, we need to notify user regarding changes in form list at FORM ENTRY or LOCKED state. If user's application is in LOCKED state, he can unlock application to get latest changes.
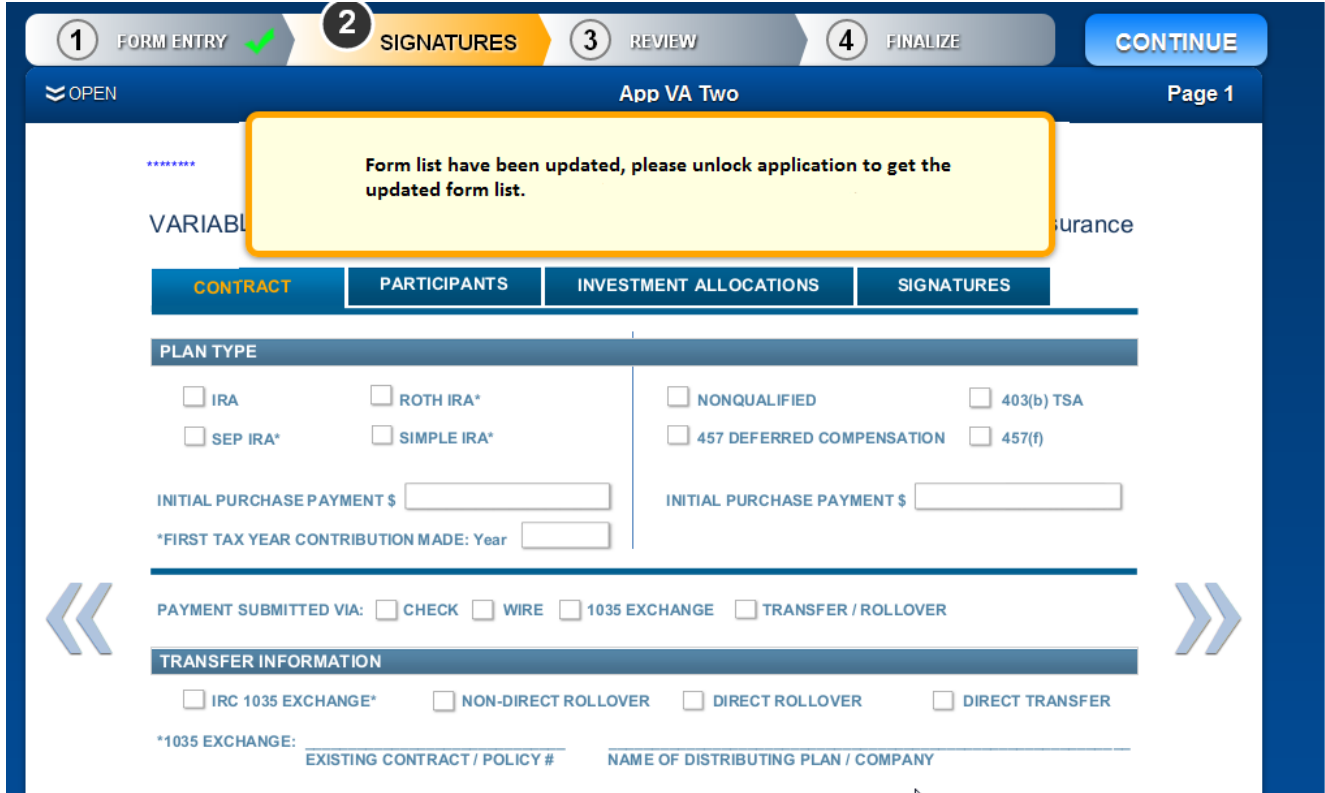

Admin Changes

No Changes.

App Changes

To implement this functionality

1. When user open application, we need to check for any changes made in package.
2. If there are changes, we will show a message to user according to state of application.
3. If application is in FORM ENTRY state, we can show simple message regarding the changes as changes are already there.
4. If application is in LOCKED state, we will show message regarding changes and necessity to unlock application to get latest changes.
5. We will use css file so we can show carrier controlled message.

UI Mock Ups

At "Form Entry" level, we can show simple message to user like -

When application is locked state, we can show following message -

Areas Impacted

System Area	Yes	Comment
FireLight App		
- **Edit Application**		
- **Form Entry**	Yes	Show message to user if any form updated/deleted in package and update application with new forms.
- **Post Lock Application**	yes	Show message to user to unlock his application when any changes founds in form list.
